*COMPANY

To Whom It May Concern,

I'm writing to express my interest in the current position listed on your website ***YOUR COMPANY. Currently, I work for gulfcoast.edu, (Gulf Coast State College), as a Data Analyst.

At BeaconEducator.com I worked as the Front-End developer, as well helping customers when needed, whether that be through calls, chats or help tickets. I also work to provide the company with an online social media presence. While at Beacon I was in charge of implementing new software to use for various tasks. I worked with a vendor to install their software on a server which had previously and link it to a domain that they had not done before. I developed a plan for our offices to start using GIT(version control), which had not been utilized previously. While there I also instituted the use of repos and worked with our lead developer to start using a ticketing system.

Before going into the technology field I worked at my families furniture stores. It was always a necessity to engage the customers in a cordial manner and to always do my best to meet there needs and if I could not then to find an alternative. I understand the premium value of customer support nd building relationships with others. From working in furniture to my job now I have plenty of experience handling a variety of situations in a calm, direct and productive manor.

While with railsdog.com, I worked with large groups to develop websites for E-commerce. Several of the companies we worked for included aloha.com, store.chipotle.com, and araks.com. I maintained the social media sites for Railsdog, such as Twitter, Facebook and LinkedIn. I was in charge of designing and managing the blog on hubspot.com.

Experience has taught me that it is not just about me. I have built strong relationships with others and I know how to communicate well with people. I can work with others to solve technical issues and implement changes. I always keep myself up to date with the latest technologies, whether by watching conferences, youtube or reading. Also, with my vast experience I am able to understand new technologies very quickly.

Thank you for your consideration!

Chad Guynn
